

## Wound Synergy IRIS Module Integrated Wound Image Calibration

A partnership between Net Health and United Wound Healing has resulted in Wound Synergy, a leading provider of clinical information systems in wound care. Our integrated clinical and regulatory solutions for wound management are utilized by more than 49,000 healthcare providers in more than 3,700 facilities.

Wound Synergy is raising the bar for wound image documentation quality and accuracy with our Wound Synergy IRIS Module, utilizing the power of TRUE-See™ Systems' imaging technology.

Founded by an award-winning cinematographer and a wound care physician, TRUE-See Systems® was born from a collaborative effort with wound care providers. The resulting patent-pending technology introduced TRUE-See as the most advanced, accurate approach to recording medical images to support documentation.

As an extension of the care provider's eyes, the Wound Synergy IRIS Module empowers care providers to:

- » Make better clinical decisions based on accurate wound image records
- » Improve patient care and safety by documenting an accurate, evidence-based record
- » Reduce the risk of litigation and detrimental surveys with an added layer of security

The Wound Synergy IRIS Module uses your existing camera and TRUE-See's patent-pending Calibration Slate to ensure color correctness, picture quality, and measurement consistency through an intuitive, reproducible workflow.
